By -

Routledge, 2014. Book Condition: New. Brand New, Unread Copy in Perfect Condition. A+ Customer Service! Summary: "Writing will create forgetfulness in the learners' souls, because they will not use their memories; they will trust to the external written characters and not remember of themselves. They will appear to be omniscient and will generally know nothing." Thus argued Socrates, as reported in Phaedrus (Plato, 370 BCE). New technology always provokes controversy. There is much to do. It's time for us not only to trust the external written characters but also, as is done here, to keep investigating the human dimensions and impacts of the tools we use." -- Milton D. Hakel, Ph.D., Bowling Green State University "Technology is an ubiquitous force driving the nature of work and organizational behavior, yet, with few exceptions, it has had a remarkably stealthy presence in industrial and organizational psychology for far too long. This book, with its exceptional array of topics and leading authors, is long overdue. It examines the broad sweep of technology applications and impacts -- current and future -- that shape behavior in the workplace. It is highly recommended." -- Steve W.J. Kozlowski, Professor of Organizational Psychology, Michigan State University "Coovert and Thompson have assembled...

### Reviews

*I actually started looking over this publication. It really is rally interesting throgh studying period. Once you begin to read the book, it is extremely difficult to leave it before concluding.*

-- Dana Hintz

*Good electronic book and valuable one. It really is basic but unexpected situations in the 50 percent in the pdf. You wont really feel monotony at at any moment of your time (that's what catalogues are for concerning when you ask me).*

-- Elisa Reinger
